Introduction

1. Problem Statement

Vehicle service histories today are stored in disconnected workshop logs, paper receipts, and isolated systems. This leads to:

- Missed maintenance schedules
- Warranty claim disputes
- Poor visibility into part failures
- Reduced vehicle resale value
- Inefficiencies for fleet managers, dealerships, and insurance providers

A centralized, reliable, and query-efficient database is required to maintain a complete digital lifecycle of a vehicle's maintenance and service history.

2. Short Description

DriveSense is a centralized Vehicle Service & Maintenance Management System that digitally stores service records, part replacements, accident logs, warranty claims, and more. It improves:

- Transparency between customers, workshops, and manufacturers
- Predictive analytics for part failures
- Operational efficiency for fleets and workshops
- Vehicle valuation during resale

User Requirements Specification

2.1 Purpose

DriveSense aims to create a secure, unified database to store the entire lifecycle of a vehicle’s service records. It eliminates scattered manual logs and prevents data mismatch, warranty fraud, and maintenance delays.

2.2 Project Description

The system includes:

- **Vehicle & Owner Registration**
Owner details, vehicle VIN, make, model, purchase date, mileage.
- **Service & Maintenance Records**
Service date, odometer, parts replaced, tasks, technician details.
- **Part Replacement & Warranty Management**
Part cost, warranty period, claim support.
- **Accident & Insurance Tracking**
Accident cause, severity, linked part failures, insurance data.
- **Fleet & Workshop Management**
Technician assignment, workshop tracking, cost analysis.
- **Analytics**
Predictive maintenance, part failure forecasting, accident trends.

2.3 Scope

- Web-based relational database system
- Complete CRUD for all entities
- Role-based dashboards: Owner, Technician, Manager, Manufacturer, Insurance
- Predictive analytics and reporting
- High security and scalability

2.4 Functional Requirements

Feature	Description
Owner & Vehicle Management	Manage owner profiles, vehicle details
Service Record Management	Add/update service visits & tasks
Part Replacement Tracking	Track replaced parts & warranty
Warranty Claims	File & validate warranty claims
Accident Reporting	Record accident data
Fleet Management	Monitor multi-vehicle maintenance
Workshop & Technician Mgmt	Allocate technicians & track performance
Resale Reports	Generate vehicle health certificates

Feature	Description
Analytics	Predictive and correlation analytics

2.5 Non-Functional Requirements

- **Performance:** Fast SQL query processing
- **Scalability:** Supports large fleets & workshops
- **Security:** Encrypted credentials, role-based access
- **Availability:** 24/7 with backups
- **Usability:** Easy dashboards for all roles
- **Reliability:** Accurate and consistent records
- **Maintainability:** Extensible for IoT/mobile

E-R Model

- **List of Entities {highlight Weak ones}**

3.1 List of Entities (Weak Entities Marked)

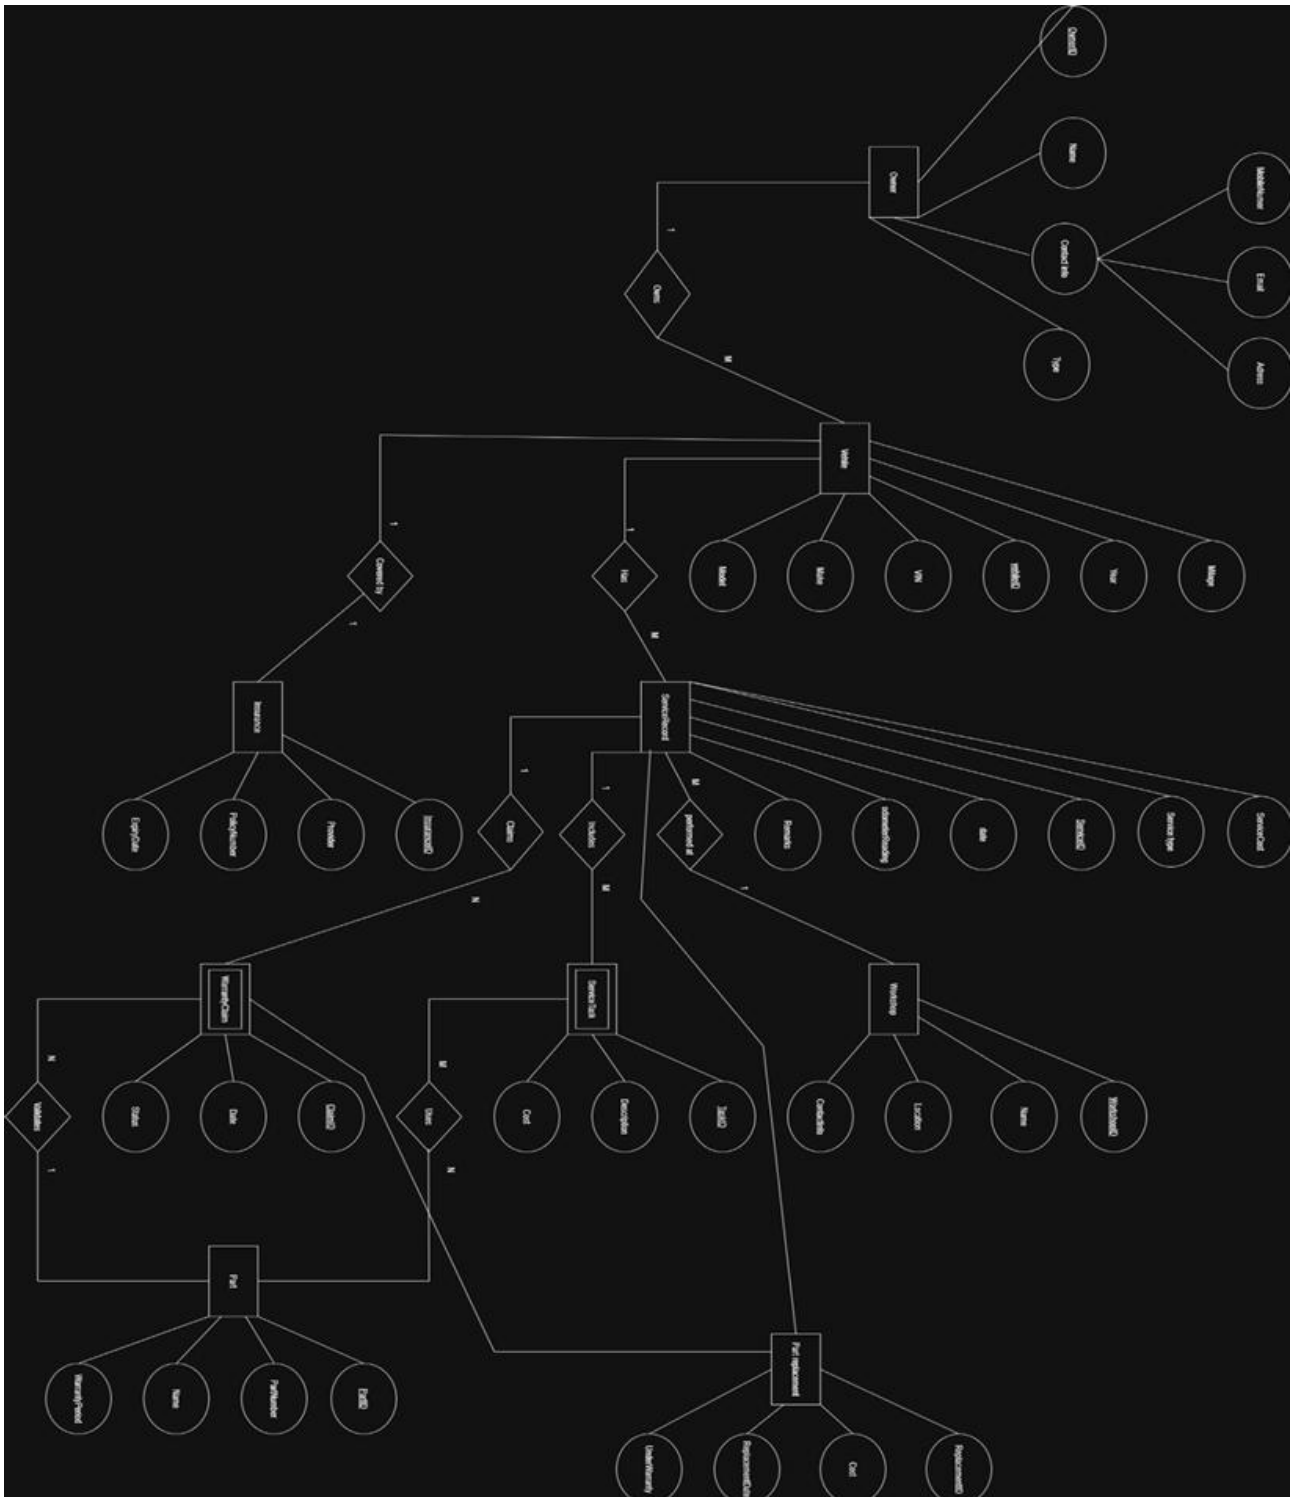

1. **Owner**
2. **Vehicle**
3. **Workshop**
4. **Technician**
5. **ServiceRecord**
6. **ServiceTask**
7. **Part**
8. **PartReplacement** (*Weak — depends on ServiceRecord*)
9. **WarrantyClaim**
10. **AccidentReport**
11. **Insurance**

3.2 Non-simple Attributes

- Owner: Address (composite)
- Vehicle: Make/Model (simple but descriptive)
- AccidentReport: Severity (categorical)
- Insurance: Provider (composite signature fields)

Drivesense

- ERD from a tool like draw.io, lucidchart

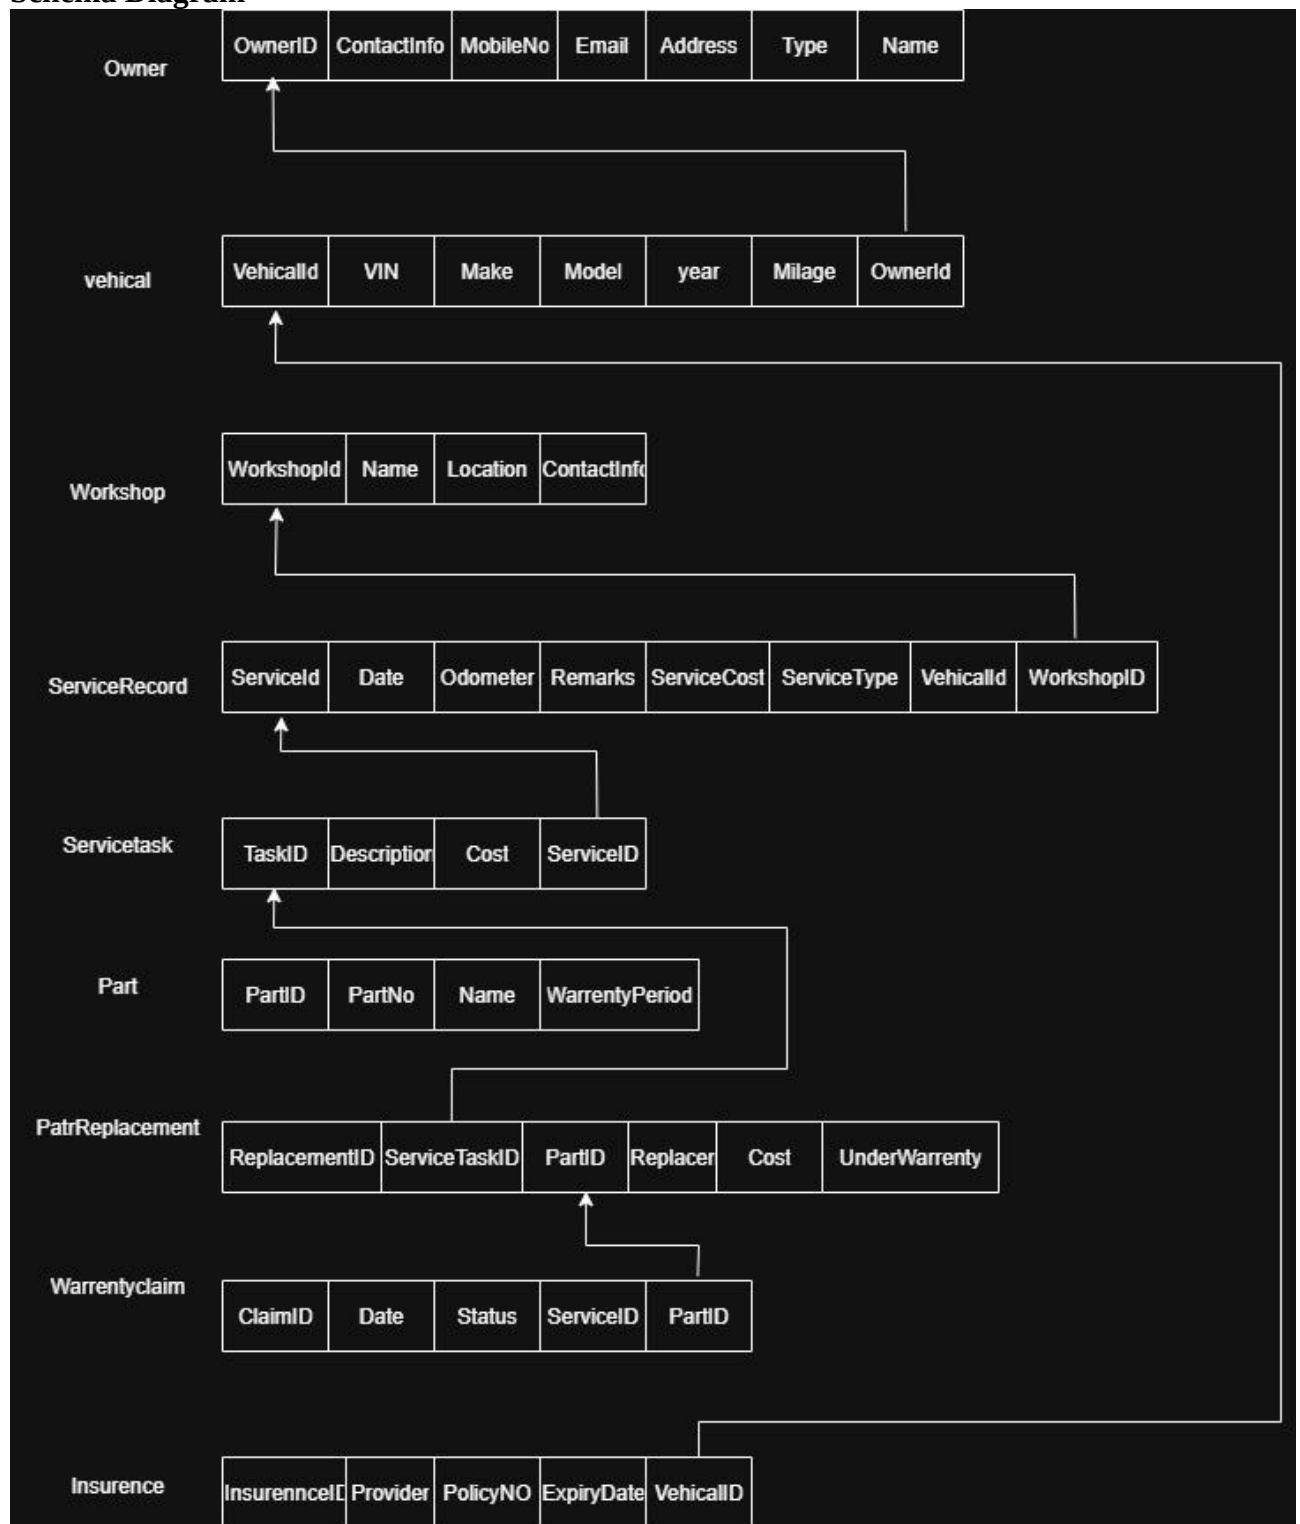

Relational Model

- **List of Relations** {label those that are not Entities in ER Model}
- 4.1 Relations Derived from Entities**
1. **Owner**(OwnerID, ContactInfo, MobileNo, Email, Address, Type, Name)
 2. **Vehicle**(VehicleID, VIN, Make, Model, Year, Mileage, OwnerID)
 3. **Workshop**(WorkshopID, Name, Location, Contact)
 4. **Technician**(TechnicianID, Name, SkillSpecialization, WorkshopID)
 5. **ServiceRecord**(ServiceID, Date, Odometer, Remarks, ServiceType, Cost, TechnicianID, VehicleID, WorkshopID)
 6. **ServiceTask**(TaskID, Description, Cost, ServiceID)
 7. **Part**(PartID, PartNo, Name, WarrantyPeriod)
 8. **PartReplacement**(ReplacementID, Date, ServiceID, PartID, Cost, UnderWarranty)
 9. **WarrantyClaim**(ClaimID, Date, Status, ServiceID, PartID, VehicleID)
 10. **Insurance**(InsuranceID, Provider, PolicyNo, ExpiryDate, VehicleID)

Derived Relation	Origin
ServiceTask	Derived from decomposition of ServiceRecord.Tasks
PartReplacement	Weak entity created by M:N between Service & Part
WarrantyClaim	Created to link service, parts & warranty

Drivesense

- Schema Diagram

Complex queries

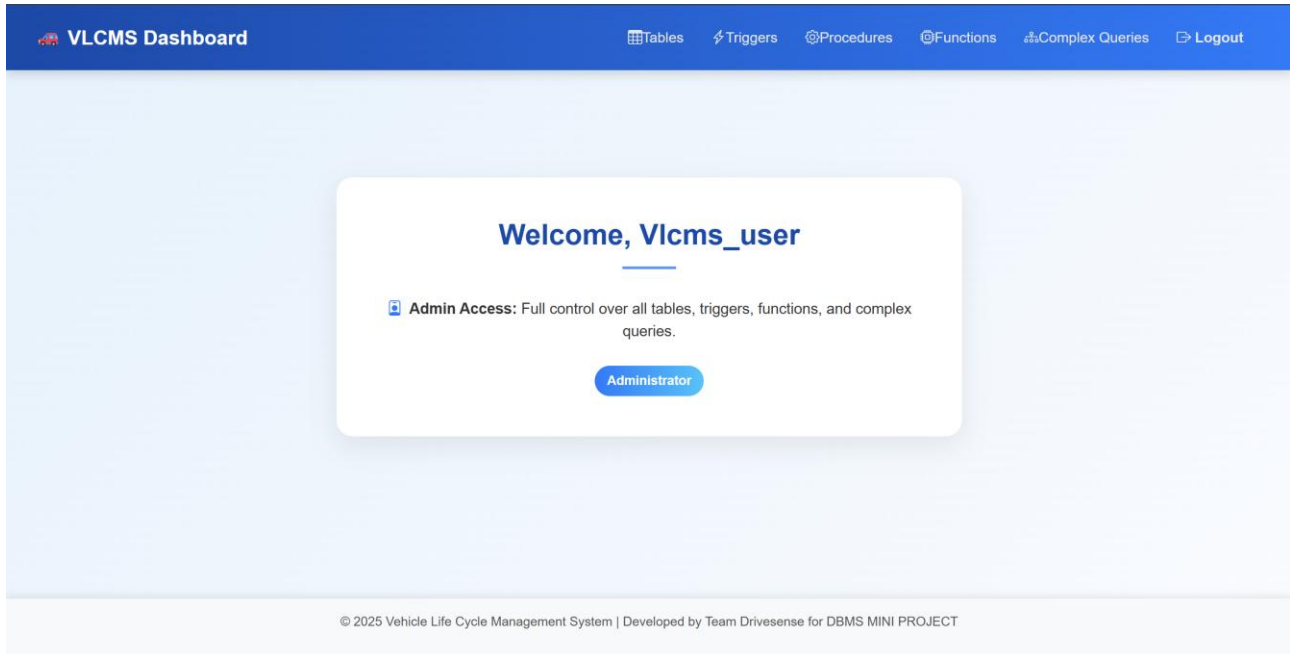

Complex SQL Queries

Select a query to execute:

Query Description	Action
Vehicles with Above-Average Mileage	<div>Run</div>
Latest Service Information	<div>Run</div>
Service Summary per Vehicle	<div>Run</div>

Back

9 Application Front-end Screenshots

10 Conclusion

DriveSense successfully centralizes vehicle maintenance records using a robust relational database. It improves:

Service traceability

Warranty validation

Part replacement monitoring

Accident analysis

Fleet operational efficiency

It demonstrates the application of database design, SQL, ER modeling, and schema normalization in a real-world automotive domain.

11 List of Software Tools Used

MYSQL for database

Flask for user interface

Python for backend (code)
